(a)
North & Central America
Adaptive radius per sink
$\beta = 1$
$\beta = 0.14 \pm 0.20$
$R^2 = 0.01$
$p = 0.50$
$N = 60$ basins
$\log_{10} M_{\text{total}}$ (accumulated pellets)
$\log_{10} P_{\text{urban}}$ (inhabitants in urban clusters)
(b)
Residuals $\epsilon = \log_{10} M - \log_{10} \hat{M}$
Residual slope = 0.27 ± 0.25
$R^2 = 0.02$
$p = 0.28$
$\log_{10} A$ (basin drainage area in km^2)
